ADVANCES IN ADDITIVE MANUFACTURING TECHNOLOGIES

**PROCEEDINGS OF 5TH INTERNATIONAL CONFERENCE ON ADVANCES IN
ADDITIVE MANUFACTURING TECHNOLOGIES (ICAAMT 2023),
NOVEMBER, 27-29TH, 2023, CHENNAI, INDIA**

Editor

Gurusamy Pathinettampadian

Professor & Head, Department of Mechanical Engineering,
Chennai Institute of Technology, Chennai, Tamilnadu, India

CRC Press

Taylor & Francis Group
Boca Raton London New York

Contents

| | |
|--|-----------|
| 1. A Process of Additive Component with Machine Learning <i>Dhandapani.S, Muthiah.C.T, Shanthi R and Eswaran.A</i> | 1 |
| 2. Risk Assessment and Management Strategies for Turbine Blade Failures in Power Generation Systems <i>Shankha Shubhra Goswami, Bikash Banerjee, Subhadip Das, Surajit Mondal and Rohit Halder</i> | 6 |
| 3. Experimental Investigation of Mango Wood Powder and Aghil Tree Resin Reinforcement with Combined Epoxy Hybrid Matrix Bio-Composite <i>A. Latha, K. Yesuraj, A. Shyaam Siddharth, R. Ganesan and R. Sathiyamoorthi</i> | 12 |
| 4. Mechanical Properties of Novel Polylactic Acid-3D Printed Core/Aloevera/Glass Fiber Reinforced Hybrid Composites <i>R. Karthick, V. Anbumalar, R. Jeyakumar, M. Kubendirian, S. Kevin Jasper, V. Sankara Pandian and D. Manish Kumar</i> | 18 |
| 5. Experimental Investigation of Polymer Matrix Composites Reinforced with Kevlar and Nano Silica Using Resin Transfer Moulding <i>Dinesh D, John Sugantha, Mohamed Anas, R. Deepak Suresh kumar and Sarukesha B</i> | 25 |
| 6. Impact of DMC and Compression Ratio on a CRDI Engine Using Methyl Esters of Waste Cooking Oil <i>R. Anbalagan, S. Sendilvelan, K. Rajan and K. Bhaskar</i> | 32 |
| 7. Combined Effect of Lipophilic and Ether Additives on the Performance and Exhaust Emissions of a CRDI Engine Powered by Elaeisguineensis Biodiesel and its Blend <i>Pavan. P, K. Bhaskar and S. Sekar</i> | 38 |
| 8. Static and Dynamic Mechanical Analysis of Prunus Dulcis Shell Powder and Basalt Fibre with Aghil Epoxy Hybrid Matrix Bio Composite <i>K. Yesuraj, A. Latha, R. Ganesan and R. Sathiyamoorthi</i> | 45 |
| 9. Development, Characterization, and Mechanical Properties Evaluation of Novel Si₃N₄-Reinforced Polymer Composites with Chicken Feather and Pineapple Leaf Natural Fibers: A Comprehensive Study <i>N. Gayathri, S. Prakash, M. Ram Kumar and A. Thameem Ansari</i> | 52 |
| 10. Mechanical Properties, Tribological MG Characteristics of Stir Cast Magnesium Metal Matrix Composites <i>P Gurusamy, P. Subash, A. Bovas Herbert Bejaxhin and N. Ramanan</i> | 60 |
| 11. Mechanical Properties and Microstructure Analysis of PETG/CF-PETG Functionally Graded Materials <i>N. Murugan, V. Gopal, B. Elumalai, T. Suresh, M. Gokul and N. Vinisha</i> | 64 |
| 12. A Comprehensive Review on Mapping of Coastal Topography Using Drones <i>Lokesh M, Aditya Vishnu Vardhan Varma, Anjani Rakesh, Saravanan P, Balaji G, Sankaralingam L, Seralathan S, Santhosh Kumar G, Vijayanandh Raja, Ramanan N and Gurusamy P</i> | 69 |

| | |
|--|------------|
| 13. Wear Behavior of Hemp - Flax - Glass Fibre Hybrid Composite Material | 75 |
| <i>Hepsi Beaula M J, A. Bhaskar, R. Swathi Rekha and P. Vasanthi</i> | |
| 14. Characterization and Performance Evaluation of Basalt Fiber Composite Materials in a Application of Polymer Break Disc | 80 |
| <i>Shakthi Sowmiya S P, Balaji G, Ramanan N, Saravanan P, Santhosh Kumar G, Vijayanandh Raja and Gurusamy P</i> | |
| 15. Experimental Investigation on Engineering Properties of Soil with Medical Waste | 85 |
| <i>B Krishnakumari, B Kandhakumar, A Latha, M Mageswari and K Deepa</i> | |
| 16. Investigation and Optimization of Electrical Discharge Machining Parameters on SS316L Alloy | 91 |
| <i>Ravikumar K, Ganesan S and Kamatchi Hariharan M</i> | |
| 17. Experimental Investigation and Finite Element Analysis of Novel Dental Restorations Material | 98 |
| <i>S. Jeyan, G. Gopalarama Subramaniyan, J. Chandru, D. Barathraju and P. Mohanraj</i> | |
| 18. An Overview on Basalt based Polymeric Composites and Varied Filler Particulates | 103 |
| <i>Zahir Hussain. M, D. Jayabalakrishnan and N. Vijayasharathi</i> | |
| 19. Automated Sewage WellDesilting Machine to Eradicate Manual Scavenging under the Surveillance of IoT | 108 |
| <i>P.T.V. Suresh Kumar, J. Jayaprakash, K.R. Padmavathi and R. Mohanraj</i> | |
| 20. Comparative Analysis of Breast Cancer using Machine Learning | 114 |
| <i>Harini Ramachandran Aruna, Shreemathi Santharaman, Kavitha Prithiviraj and Chitra Devarajalu</i> | |
| 21. Flow Analysis of Centrifugal Pump Impeller Using FEM | 118 |
| <i>J. Chandru, P. Jayaraman, S. Jeyan, R. Seethapathy and S. Kevin Bennett</i> | |
| 22. Diabetic Retinopathy Image Recognition Using AI Technique | 124 |
| <i>M. Priyadarshni, Nagajothi, P. Ponharieesh and R. Ganesh</i> | |
| 23. Microstructural Characterization and Investigation on Mechanical Properties of Stir Cast Hybrid A356/B₄C/ZrO₂ Composites with Strontium as Grain Modifier | 129 |
| <i>S. Venkat Prasat, A. Rajkumar, N. Venkateshwaran and S. Sekar</i> | |
| 24. Polycystic Ovarian Syndrome Analysis using Machine Learning | 135 |
| <i>Nishithha Premkumar Sangeetha, Neshanthini Vengatesan, Kavitha Prithiviraj and Maheswari Marimuthu</i> | |
| 25. Experimental Exploration of Rice Husk Gasification in the Circulate Fluidized Bed Gasifier | 139 |
| <i>V. Chokkalingam, A. Paramasivam, J. Rajprasad and E. Gomathi</i> | |
| 26. Design and Analysis of a Rugged Swing-Arm for Electric Two-Wheelers | 145 |
| <i>Swamy K, Suresh A, Ravi S, Niranjan K, Srivardhan R and Nishanth S.M</i> | |
| 27. Enhancement of Mechanical and Water Resistance Characteristics of Pineapple Fiber Polymer Composites through Nano SiC Reinforcement | 150 |
| <i>T. Maridurai, V. Muthuraman, P. Gurusamy and S. Thirugnanam</i> | |
| 28. Experimental Comparison of Mechanical Stability and Morphology Between Tree Fibres and Shrub Fibres Reinforced Epoxy Bio-Composites | 156 |
| <i>V. Noble Arulandu, V. Muthuraman, C. Dhanasekaran and M. Chandrasekaran</i> | |
| 29. Tribological Properties of Friction Stir Weave Aluminium and Copperwelding Utilisinggraphene Particles as a Dispersing Agent | 161 |
| <i>D. Jayabalakrishnanan, S. Senthil Kumar, R. Ganesamoorthi, M. Balasubramanian, R. Sathiyamoorthi and Hepsi Beaula M. J</i> | |
| 30. LM-25 Hybrid Al-Metal Matrix Composites: An Experimental Study of Their Mechanical Properties | 166 |
| <i>R. Manjunathan, S. Hari Krishna Raj, P. Prabhakaran, S. Riyaz Ahamed and S. Tarun Vikram</i> | |
| 31. Design, Thermal, and Static Investigations of Disc Brake Systems in Automotive and Bicycle Applications for Enhanced Performance | 172 |
| <i>V Nagarajan, R. Anbazhagan, S Hari Krishna Raj, S. Aswin, G. Gokul and U. Gokulakrishnan</i> | |
| 32. Design and Development of Cost Effective Electronic Ignition Driver Circuit for GDI Engine | 178 |
| <i>N. Shivakumar, R. Lalitha, V. Sathy, M. Dinesh Babu and R. Sathiyamoorthi</i> | |

| | |
|---|------------|
| 33. Effect of Circular and Chevron Nozzles to Reduce Infrared Signature of Exhaust Plume | 184 |
| <i>G. Dinesh Kumar, Clement Edward Vasantha A, Gursharanjit Singh, Venkata Neeraj, Bindu B, Nivethitha P, Shurdeka D, Kancharla Darpan and Sheryl Hepzibah S</i> | |
| 34. Ascertaining the Suitability of Calcium Added Magnesium Alloy for Biomedical Application | 190 |
| <i>K. V. Sreejaya, M. Sivaprakash, I.P. Rakesh and S. Ajith</i> | |
| 35. Corrosion Studies, of Friction Stir Welded-AA5754-H111 with Mg-AZ61 Alloys by using Salt Spray Test | 196 |
| <i>Y. Premraj, M. Selvaraj, K. Suresh and S. Balamurugan</i> | |
| 36. Design and Analysis of Asymmetric Circular Flexure Hinges using Micro Gripper for Compliant Mechanism | 202 |
| <i>V Gopal, R. Bharanidaran, M Antony Stevewake and N Jayakanthan</i> | |
| 37. An Investigation into the Effects of a Scandium Inclusion on the Mechanical and Micro-structural Characteristics of Friction Stir Weld Joint | 208 |
| <i>Shine. K, Ragesh PR, Deepu T, Sadanandan R and Sasi Lakshmikanth R</i> | |
| 38. Salt Spray Corrosion Studies of Friction Stir Welded and Processed AZ31 Mg Alloys with Al₂O₃ and Cu | 214 |
| <i>M. Selvaraj, S. Balamurugan, Dharmalingam and Y. Premraj</i> | |
| 39. Experimental and Numerical Investigation of Compression Behavior of Additive Manufactured Lattice Structures | 218 |
| <i>R. Kishore, P. Gurusamy, P. Jagan, and V. Lingesh Kanna</i> | |
| 40. Green Tribology: Sustainable Approaches in Lubricating Oil Formulations | 225 |
| <i>Subham Saha, Krishna Kumar Gupta, Shouvik Sarkar, Shankha Shubhra Goswami, Bikash Banerjee and Surajit Mondal</i> | |
| 41. Circularity Error Analysis and Comparison in Drilling Natural Fiber Reinforced Polymer Composite | 231 |
| <i>R. Kalai selvan and N. Senthilkumar</i> | |
| 42. A Comparative Study on the Influence of Novel Neem Fiber on the Tensile Strength of Wood Fiber-reinforced Polylactic Acid Composite Materials | 236 |
| <i>Ch. Ruben Raju and K. Koppiahraj</i> | |
| 43. Investigating of Tensile Strength on 3D Printing Lattice Structures (Acrylonitrile Butadiene Styrene Resin) Compared with and without Silica Nanoparticles | 241 |
| <i>P Deepak and A. Vasudevan</i> | |
| 44. Comparison of Novel Hash Pattern Friction Welding of En10083 Steel with Commercial Friction Welding Method for Improving the Interface Friction Temperature | 246 |
| <i>N.G. Navin kumar and A. Pradeep</i> | |
| 45. Comparative Analysis of Surface Roughness in Monel Alloy Using Novel Minimum Quantity Lubrication Technique and Dry Machining | 251 |
| <i>M. Vinay and B. Navin Kumar</i> | |
| 46. Comparative Study on Tensile Strength of Novel Metal Matrix Composite of Aluminum Alloy AA5083 with 0% and 4% SiC Powder Reinforcement | 257 |
| <i>P. Naga. Sai. Rohith and D. Vinodh</i> | |
| 47. Influence of Al wire Mesh in Impact Strength of 5 ply Bamboo/Epoxy Panels | 262 |
| <i>Praveen Kumar K J, G. Ramya Devi and R. Saravanan</i> | |
| 48. Study on MRR of Epoxy Composite Incorporated with 15% Fiber and 5% Novel Nano Carbon Particles Made of Peanut Husk during Drilling Process | 267 |
| <i>Pelluricharan and D. Satish Kumar</i> | |
| 49. Investigation and Comparison on Light Emitting Property of Halogen with Chromium-Zinc Oxide (Cr-ZnO) Composite Material used in Automobile Engineering by Novel Sol-Gel Method | 272 |
| <i>Rayachoty Bhaskar and P. Karthik</i> | |
| 50. A Comparative Analysis of Flexural Strength between 3D Printed Lattice Structures (PLA) Compared with and without the Silica Nanoparticle | 276 |
| <i>S. Guna Sekhar and A. Vasudevan</i> | |

| | |
|---|------------|
| 51. Evaluation of Hardness of Glass/ Luffa Fiber Reinforced Epoxy Composite with and without Addition of Novel Shorea Robusta Filler <i>Arvind B. S. and Bharathiraja G.</i> | 281 |
| 52. An Experimental Study to Compare Tensile Strength of 10% Egg Shell Powder Infused Glass/ Flax Fibre Reinforced Epoxy Resin Novel Composite with Plain Glass/Flax Fibre Reinforced Epoxy Composite <i>B. Bharath Kumar and D. Vinodh</i> | 286 |
| 53. Gaussian and Gradient-Based Edge Detection Algorithm Studies of Cutting Tool Wear <i>S. Senthil Pon Vignesh and Radhika Baskar</i> | 291 |
| 54. Evaluating Mean Square Error for Flank Wear Assessment in Turning of Duplex Stainless Steel <i>S. Senthil Pon Vignesh and A. Mary Joy Kinol</i> | 297 |
| 55. Investigation of Mean Accuracy of Surface Roughness in Turning of Monel 400 by EWT in Comparison with T-DYWT <i>Y. Raghavendra Reddy and B Anitha Vijayalakshmi</i> | 302 |
| 56. Comparative Investigation of Surface Roughness Reduction in CNC Milling of Novel Hybrid Al 7075-Mg-SiC-FA and Al 6061-SiC-Mg Metal Matrix Composites <i>K. Bharath and A. Bovas Herbert Bejaxhin</i> | 307 |
| 57. Design, Analysis and Experimentation of Brake Discs with Copper—Aluminium Alloy and its Different Composition <i>Yogesh Vaidhyanathan, Vishal T, Sai Srinivasan B and Saran R</i> | 312 |
| 58. Current Status Review on Smart Drones Technology for Environmental Monitoring <i>Charumathy Mani, Baluchamy Shanthini, Ranganathan Rani Hemamalini, Rajasekaran Vinodhini, Pachaivannan Partheeban and R. Satiyamoorthy</i> | 318 |
| 59. LM6 Aluminium Alloy Processing by Die Casting—A State of the Art <i>A Parthiban, A Ramesh, A Suresh, D Dinesh and P S Kanishkha</i> | 326 |
| 60. Heat Transfer and Thermal Performance of a Heat Sink with Pin Fins <i>S. Balamurugan, R. Karthikeyan, R. Muthukumaran and Mukilarasan N</i> | 331 |
| 61. Effect of EGR and LPG Addition on Jatropha Biodiesel Fuelled CI Engine <i>V. Vinodkumar, L. Ranganathan, T. Anand and V. Velmurugan</i> | 337 |
| 62. DC Current-Powered Intelligent Defense System <i>T. Thanka Geetha, Vijayan R, D. Surrya Prakash and A. Mani</i> | 344 |
| 63. Ballistic Impact Analysis of Glass with Nano-Silica Reinforced Composite <i>Yuvaraj K R, Vijayakumar M D, Gokuldass R, Jayabalakrishnan D and Lokesh G</i> | 349 |
| 64. Parameter Optimization and Studies on the Properties of Similar PTIG Welded AA6082 Aluminium Alloys <i>Krishna. M, Abhilash. V, Satheesh. S.S, Hepsi Beaula. M.J, C. Devanathan, Sounthararasu. V and Sasi Lakshmikanth. R</i> | 356 |
| 65. A Novel Frustum of Square Pyramid Solar Still for Pure Water Production: A Comparative Study with Single Slope Solar Still <i>Vincent Raphael and V.Savithiri</i> | 363 |
| 66. Prediction of Mechanical Properties of Polymer Epoxy Composites <i>Nallathambi. K, Aswathnarayanan. A, Agilan. R, Harvindakishan. P and Akash. V</i> | 368 |
| 67. A Comprehensive Review of CPU Cooling Systems: Innovations, Efficiency, and Future Directions <i>G. Sastha Roopan and M. D Vijayakumar</i> | 375 |
| 68. Mechanical Characterization and Metallurgical Studies of Friction Stir Processed AA5083-H111 TIG Welded Joints <i>R. Manivannan, K. Sathish Kumar, N. Natarajan, S. Balamurugan, S. Sanjai, V. Vignesh, T. K. Uthayananithi and P. Padmanaban</i> | 381 |

| | |
|--|------------|
| 69. An In-Depth Comparative Analysis of the Influence of Silver Nanoparticles in GaAs Antireflection Coating on the Electrical Parameters of Solar Cells, Investigating the Effect of Varied SiO₂ Protective Layer Thickness | 387 |
| <i>Manikandan S and Radhika Baskar</i> | |
| 70. Nanoparticle-Enhanced Indium Tin Oxide Antireflection Coatings: A Multifaceted Exploration of Silver Nanoparticle Effects and Silicon Dioxide Front Layer Thickness on Photovoltaic Cell Performance | 391 |
| <i>Manikandan S and Radhika Baskar</i> | |
| 71. Experimental Study of Shock Wave Characteristics of Bullet Train Nose Cone (IKADA Model) at Supersonic Speed with Bio-Inspired Approach | 395 |
| <i>Solaiyappan G, Mano R T, Santhakumar U, Balaji G, Saravanan P, Ramanan N, Boopathy G, Santhosh Kumar G, Vijayanandh Raja and Gurusamy P</i> | |
| 72. Study on Induced Drag Reduction of Electric Aircraft Wing Using Various Winglet Configurations: A Review | 402 |
| <i>Muthu Kamakshi Sundaram, Vasireddi Ravi Teja, Bokka Sasank Sai, Saravanan P, Balaji G, Sankaralingam L, Seralathan S, Santhosh Kumar G, Vijayanandh Raja, Ramanan N and Gurusamy P</i> | |
| 73. Shock Formation on Double Ramp Surface in Supersonic Wind Tunnel | 408 |
| <i>Abdul Wajid Ali, Weketshe Thopi, Sheikh Sameer, Thillaikumar T, Balaji G, Ramanan N, Santhosh Kumar G, Vijayanandh Raja and Gurusamy P</i> | |
| 74. Topology Optimization of Electric Solar Vehicle Brake Pedal | 414 |
| <i>S. Pavithra, A. Suresh, R. Ganeshamoorthy, A. Parthiban, D. Dinesh and Dharanidharan P</i> | |
| 75. Corrosion and Erosion Analysis of S690 Steel used in Hydro Turbines | 418 |
| <i>M. Vinayagamoorthy, R. Ganeshamoorthy and Yuvaraj K R</i> | |
| 76. Development of Structural Bio Composite using Bamboo Fiber Chitoson Bio Polymer with Epoxy Resin | 422 |
| <i>Velmurugan S, Gayathri N, Gurusamy P, Sharath P, Rohith P and Prasanna Ram M</i> | |
| 77. Unveiling the Influence of Stacking: Analyzing Epoxy Hybrid Composites Infused with Kevlar and Jute Fibers and Their Distinct Features | 429 |
| <i>R. Deepak Suresh Kumar, P. Gurusamy and L. Hrithick Kumar</i> | |
| 78. Experimental Investigation of Casted Aluminium Alloy Using Electrical Discharge Machining | 436 |
| <i>Gayathri N, Velmurugan S, Gowtham K, Sriram B and Pradeep Kumar S</i> | |
| 79. Experimental Investigation of Mechanical Behaviour, Wear, Microstructure of Aluminium, Silicon Carbide and Zirconia | 442 |
| <i>Velmurugan S, Gayathri N, Gurusamy P, Akash A P, Gokul R and Hari K</i> | |
| 80. Dry and Wet Sliding Wear Behaviour of Biochar Dispersed Rock Wool Polyester Composite for Brake Pad Application | 447 |
| <i>N. Gayathri, S. Pooja, D. Samsujith and G. Santhosh</i> | |
| 81. Experimental Investigation of Wing with Leading Edge Droop | 452 |
| <i>Mahendranth Reddy, Pavan Kumar K, Bhanu Prakash K, Balaji G, Saravanan P, Ramanan N, Santhosh Kumar G, Vijayanandh Raja and Gurusamy P</i> | |
| 82. Experimental Analysis of Hybrid Metal Matrix Composites Made of SqueezeCast Aluminum | 459 |
| <i>J. Joshua Kingsly, P. Gurusamy and A. Sivarangar</i> | |
| 83. Finite Element Analysis of the Mechanical Properties of Natural Fibre Reinforced Composites | 464 |
| <i>R. Ganeshamoorthy, K R Padmavathy, D Dhana Sekar and J Thamilarasan</i> | |
| 84. Microstructure and Mechanical Charaterization of Wood PLA/CF-PLA Binding Layer Parts using FDM | 470 |
| <i>R. Gokuldass, B. Krishna kumar, Nanvaniss. M and Manikandagopal S</i> | |
| 85. Mechanical and Metallurgical Characterization of Dissimilar AA5083-H111 and AA6106-T6 by Friction Stir Welding | 476 |
| <i>R. Manivannan, V. Guru, M. Raghupathi, M. Mothilal, R. Muniyappan, P. Poovarasan, M. Sivanathan and S. Balamurugan</i> | |

x Advances in Additive Manufacturing Technologies

| | |
|--|------------|
| 86. Analysis of Open Circuit Voltage (VoC) in Solar Cell and Comparison of Simulation Results for SiO₂ and ITO as the Anti-reflective Coating Material with Nanoparticles <i>Radhika Baskar</i> | 480 |
| 87. Perspective Aspects of Carbon—Enabled Transistors by Quantitative Improvement of Tube Diameter Suitable for Low Power Electronics <i>Sathish G and Radhika Baskar</i> | 485 |
| 88. Investigating Mechanical Properties of LM25 Aluminum Matrix Composites with Varied Silicon-CNT Reinforcements <i>Nagarajan V, P. Gurusamy, N. Ramanan, Hari Krishna Raj S, Santhosh Kumar V, Sanjai kumar S and Balaji. K</i> | 490 |
| 89. Comprehensive Mechanical, Thermal, and Interlaminar Characterisation of Basalt Fibre Composite Materials for Enhanced Structural Integrity <i>K. Mariappan, V. Nagarajan, P. Gurusamy, N. Ramanan, S. Hari Krishna Raj, S. Baskar; A. Sanjeev kumar, R. Prawin kumar</i> | 497 |
| 90. Inspection of Defects in Weldments of Manuarite 900 Alloy using Ultrasound B Spline Imaging Technique <i>Raj Jawahar, R. Lakshmana Kumar S, D Jayabalakrishnan and Somasundaram S</i> | 503 |
| 91. Design and Fabrication of Solar Dryer for Agricultural Products <i>Murali Krishna M, Kumar S D, Vignesh R, Manimaran M, Rajkumar G, Yuvaraj S</i> | 507 |
| 92. Design and Analysis of Aerospace Wing Stiffener Structures by Using ER4043 Alloy in Wire Arc Additive Manufacturing (WAAM) Method <i>Murali Krishna M, Manikandan N, Dinesh Kumar R, Lokeshwaran R, Mukesh D and Nivash B</i> | 514 |
| 93. Performance Analytics of CNTFET Devices: Electrical Characteristics of CNTFET Using Yttrium Oxide as Insulator in Comparison with Traditional Silicon MOSFET Devices <i>Radhika Baskar</i> | 520 |
| 94. The Impact of Silver Nanoparticles as Back Reflectors on the Electrical Characteristics of Amorphous Silicon Solar Cells: Insights from QC RF FDTD Models with Varied SiO₂ Front Layer Thicknesses <i>Manikandan S and Radhika Baskar</i> | 524 |
| 95. An Exhaustive Examination, Evaluation, and Comparative Assessment of Diverse Anti-Reflection Coating Methods for the Optimization of Solar Cell Efficiency: A Comprehensive Review and Analysis <i>Manikandan S and Radhika Baskar</i> | 529 |
| 96. Comparative Analysis of Quantum Capacitance and Drain Current in CNTFET: Unveiling the Superiority of Conventional Insulator Materials Over Standard Silicon Field <i>Sathish G and Radhika Baskar</i> | 535 |
| 97. Experimental Investigation on Mechanical Properties of AA8011 Hybrid Metal Matrix Composites <i>Yogesh Vaidhyanathan, Srinivasan D, Subash V and Payaskhan A</i> | 540 |
| 98. Innovative Assistance for the Visually Impaired: Face Recognition, Navigation, Water and Fire Safety with Raspberry PI <i>S. D. Kumar, Balaji. S, Arul Selvan and VIJAY, Yokesh Kumar</i> | 545 |
| 99. Comprehensive Review of Carbon Enabled Transistors for Ultra-Low Power Electronics in Integrated Circuits Over Silicon Devices <i>Sathish G and Radhika Baskar</i> | 551 |
| 100. Enhancing Photovoltaic Panel Efficiency through Multilayer Optimization: A Comparative Analysis of MgO Antireflection Overlay and Silver Nanoparticle Integration, Characterized via QC RF-FDTD Simulation <i>Manikandan S and Radhika Baskar</i> | 556 |
| 101. FEA Analysis and Experimental Investigation of Leaf Spring with Composite Hybrid Natural Fibre <i>Manjunathan R, Velmurugan S, Keerthivasan D, Lokesh S and Madhavan M</i> | 560 |

Preface

We are delighted to present the proceedings of the 5th International Conference on Advances in Additive Manufacturing Technologies (ICAAMT 2023). This conference serves as a premier forum for researchers, practitioners, and industry experts to share their latest findings, innovations, and insights in the field of additive manufacturing. The rapid advancements and the increasing adoption of these technologies across various sectors underscore the importance of this gathering. The conference was held from November 27-29, 2023, in Chennai, India and organized by the Department of Mechanical Engineering, Chennai Institute of Technology, Chennai, India.

The ever-increasing demands for new products accelerate the growth of manufacturing technologies. Additive manufacturing is the most popular due to its ability to print complex customized geometries. Technological advancements and research take additive manufacturing to the next level of customized functional end-use products. The applications are diversified into various fields, including aerospace, medical, automobiles, etc.

Some of the critical features of additive manufacturing are lower start-up costs, ease of learning, reduced raw material wastage, customization to the individual, digital design integration, speed of prototype, speed from prototype to production, lower energy and environmental costs, low volume production runs, distributed manufacturing etc.,

We deeply acknowledge that the success of the conference is a collective achievement, a testament to the collaborative spirit of our community. We are grateful to our esteemed Patron, Chairs, and Principal for their invaluable guidance and support in organizing this event. The program committee's meticulous and timely review of the papers played a pivotal role in the success of this international conference.

We extend our heartfelt gratitude to the authors for their significant contributions, the reviewers for their insightful feedback, and the organizing committee for their relentless efforts in making this conference a resounding success. We are confident that the knowledge shared through these proceedings will not only inspire but also drive further research and innovation in the dynamic and rapidly evolving field of additive manufacturing.

We are optimistic that these proceedings will prove to be a valuable resource, enriching your work and contributing to the advancement of additive manufacturing. We hope you find them informative and insightful.

Sincerely,

Dr. P. Gurusamy
Organizing Secretary (ICAAMT 2023)
Professor & HOD, Mechanical Engineering,
Chennai Institute of Technology, Chennai-600 069,
Tamilnadu, India

Technical Program Committee

PROGRAM COMMITTEE

CHIEF PATRONS

Shri. P. Sriram, Chairman, Chennai Institute of Technology, Chennai

Smt. S. Sridevi, Secretary, Chennai Institute of Technology, Chennai

Shri. S. Gokulakrishnan, Director-Innovations, Chennai Institute of Technology, Chennai

PARTON

Dr. A. Ramesh, Principal, Chennai Institute of Technology, Chennai

CO PATRONS

Dr. S. Neethi, Dean – Curriculum Development & Enrichment, Chennai Institute of Technology, Chennai

Dr. P. Partheepan, Dean – Planning & Development, Chennai Institute of Technology, Chennai

CONVENER

Dr. P. Gurusamy, Professor & Head, Mechanical Engineering, Chennai Institute of Technology, Chennai

CO-CONVENER

Dr. M.D. Vijayakumar, Professor, Mechanical Engineering, Chennai Institute of Technology, Chennai

ORGANISING COMMITTEE

Dr. S. Ravi, Professor in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. R. Ganesamoorthy, Professor in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. T. Arun Kumar, Professor in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. R. Sathiyamoorthi, Professor in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. S. Rajarasalnath, Associate Professor in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. D. Jayabalakrishnan, Associate Professor in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. J. Rajaparthiban, Asst. Prof in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. B. Yokesh Kumar, Asst. Prof in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. R. Vijayan, Asst. Prof in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. S. Mohan Kumar, Asst. Prof in Center for Additive Manufacturing, Chennai Institute of Technology, Chennai

Dr. S. Ravi, Asst. Prof in Mechanical Engineering, Chennai Institute of Technology, Chennai

Dr. Biplob Bhattacharjee, Asst. Prof in Center for Additive Manufacturing, Chennai Institute of Technology, Chennai

Dr. Ramasamy, Asst. Prof in Center for Additive Manufacturing, Chennai Institute of Technology, Chennai

About the Editor

Dr. P. Gurusamy is a distinguished academician and a reputed researcher in Mechanical Engineering with a remarkable career spanning over two decades. He commenced his academic journey with a Bachelor of Engineering (B.E.) in Mechanical Engineering from the Government College of Engineering, Tirunelveli, in 1996. His educational pursuits continued with a Master of Engineering (M.E.) in Production Engineering from Thiagarajar College of Engineering, Madurai, which he completed in 1998.

Dr Gurusamy's quest for knowledge led him to Anna University, CEG Campus, Chennai, where he earned his PhD in 2014. His doctoral research, titled "Influence of Squeeze Casting Parameters on the Mechanical Properties and the Solidification Behaviour of the Al/SiCp Composites," received a 'Highly Recommended' rating from the examiner, highlighting the significant contribution of his work to the field.

With two years of Industrial Experience and a 25-year teaching career, Dr. Gurusamy has become a pivotal figure in Mechanical Engineering education and research. He is a recognized supervisor for guiding PhD and M.S. research scholars at Anna University, Faculty of Mechanical Engineering. Currently, eleven scholars are pursuing research under his guidance.

Dr. Gurusamy's research interests are diverse and impactful, encompassing Composite Materials, Foundry Technology, Nanomaterials, Surface Technology & Advanced Materials Processing, Carbon Nanotubes, and Polymer Nanoclay Composites. His prolific contributions to the academic community include 79 publications in International Journals and numerous participations in International Conferences across India and abroad.

In addition to his academic and research endeavours, Dr Gurusamy has also demonstrated his innovative capabilities by publishing many patents in Material Science. His professional affiliations include memberships in esteemed organizations such as the American Society of Mechanical Engineers (ASME), the Society of Automotive Engineers (SAE), and the Indian Society for Technical Education (ISTE).

Dr. P. Gurusamy's enduring dedication to education, research, and innovation continues to inspire his students and peers, making him a respected and influential figure in the field of Mechanical Engineering.

ABSTRACT: Industry 5.0 has resulted in an explosion of machine learning (ML) frameworks, especially auto-ML techniques that are easy for non-experts to use. To do away with the trial-and-error process of determining the right input parameters in 3D printers. Specimens were prepared for the process using 3D printing and the Fusion Deposition Method (FDM). The result of the software was used to estimate which of the several machine learning algorithms was the best. Surface testing on the vehicle component specimen was used to forecast several output metrics, such as drilling accuracy and roughness, with the use of machine learning in 3D printing. The program has an accuracy of 93.56% and an error of 6.43%, according to the final results.

KEYWORDS: Machine learning, 3D printing, Algorithm, Accuracy with variance

1. INTRODUCTION

The most recent machine learning techniques used for clean data processing go beyond simple learning. Time series forecasting, supply chain management, energy, healthcare, sales, environmental research, manufacturing, agriculture, and many more fields have a wide range of industrial and scientific applications. Similar to this, a Python library is used for a uniform interface in machine learning, which makes it simple to carry out model building, inspection, and application. Many industries, including self-driving cars, space research, and medicine, use machine learning techniques. This study focuses on the area of additive manufacturing specifically related to 3D printers.

1.1 Artificial Intelligence

Artificial intelligence (AI) many subdivisions, including machine learning. AI is the fusion of machine intelligence and other components. Prominent AI researchers investigate “intelligent agents,” which include a feature to accurately assess the environment and optimize execution to successfully accomplish objectives. AI is used to explain machines that replicate cognitive processes like “learning” and “problem solving,” which are associated with the human mind. The basic ideas of AI research’s computer algorithms, which automatically get better with experience, are becoming more and more capable of handling machines

1.2 Machine Learning

Machine learning that automatically advances through practice with data and an understanding of computer techniques. As a component of artificial intelligence, it is impractical to create traditional algorithms for the necessary computational statistics-based activities[1]. ktrain is a low-code Python module that uses machine learning to make machine learning (ML) more approachable and simpler to use. Created a unified interface that required only three or four “commands” or lines of code to swiftly solve a variety of jobs in his research, also noted that there has been a lot of attention focused on unified machine learning. [2] Because of the variations in the approaches, the many approaches that have been released are not well documented and unclear. The goal of this work is to construct a design that fills in the gaps and completes the missing links in the areas of auto machine learning, hyper parameter tweaking, and metal earning process. Darts can solve a Python machine learning framework for time series problems like forecasting. This can take the form of a series, meta-learning across several series, training on huge datasets, combining outside data, putting together models, and offering robust support for probabilistic forecasting. [3] With the help of strong parameter adjustment and Auto ML approaches, the ML frameworks can be used by systems that are not experts. The directed cyclic graphs utilized in mlr3pipelines are a foundation for defining both simple and complicated non-linear machine learning operations. [4]. The framework uses bench marking, tweaking, and convenient resemblance components as part of the mlr3 ecosystem. A few engines, including the Knowledge Base, GUI, Visualization, and Human engines, were introduced by Penn AI. Even while these are intriguing ideas for creating a user-friendly auto ML system, they don't offer a significant contribution to the cutting edge of auto ML research. [5].

1.3 Deep Learning

Artificial neural networks, on which machine learning techniques are based, provide the basis for deep learning. The process of learning may be partly, fully, or not seen. Deep learning algorithms generate substantial credit assignment path (CAP) depth. The number of layers [6] is used to more precisely convert this data. Deep learning models in the medical field have grown exceptionally well as a result of the rapid advancements in machine learning, graphics processing technology, and medical imaging data. [7] The difficulties in applying 3D CNNs to the realm of medical imaging, deep learning models, and potential future developments. Machine learning uses a variety of techniques when there isn't a completely functional algorithm.

1.4 Researcher's Outlook

The biometric utility is necessary to identify facial analysis and run the systems, and it can also be helpful in removing low-quality data. This body of literature offers survey analysis using visible wavelength facial photographs within the face biometrics paradigm. [6] For instance, the picture selection and facial image quality evaluation that are covered in his research indicate the infrared quality assessment as a tendency towards deep learning. To provide high-quality and effective services, customer service is changed by converting from traditional to automated service using various computational data. [8] Big data is needed since it requires knowledge of data analysis. In small and medium-sized businesses, a lack of resources and scale leads to a lack of information and experience. In order to address this problem, open and automated customer service platforms like block chains, automated machine learning (AutoML), and the Internet of things (IoT) are suggested. This creates a third party dependency, which increases costs. These platforms take into account data collection, data security, and economic factors. AutoML has advanced neural network architecture significantly by using complex, expertly-designed layers as building blocks [9]. By proposing a unique framework, we may eliminate human bias through a generic search space of two-layer neural networks trained by back propagation.

2. MATERIALS AND METHODS

Additive manufacturing, also known as 3D printing, is the process of creating thin layers. Above the resources by lying down, we can eventually obtain a 3D digital replica of the physical object. Layer by layer of materials, it transforms the computer object of the CAD model into a real form. The reagent, powder, filament, and pellets are the materials delivered in various states and employed for this purpose. There are numerous production methods available for the AM process. In this undertaking, the merged. The specimen is made using the fused deposition modeling (FDM) technique. This procedure is conducted using temperature-controlled head sequentially extrudes thermoplastic material, allowing the path using 3D CAD information. Starting with the model's STL file, pre-processing software is used. Mathematically divided horizontal layers with thicknesses ranging from +/- 0.137 to 0.264 mm. When necessary, support structure is required. A 3D model is produced using the tool path and data.

The specimen used is printed using the following setup parameters. 1. Layer Height: 0.01mm, 2. Fan Speed: 25%, 3. Nozzle temperature:250 deg 4.Bed temperature 50 deg, 5. Print speed: 120 (mm/s), 6. Materials: Polylactic Acid (PLA)

Figure 1.1 shows the specimen created by the AM method as well as the experimental procedure. The Fused Deposition Modelling (FDM) procedure is used to 3D print the object.

Fig. 1.1 Specimen created by AM method

3. RESULTS AND DISCUSSION

The 3D printing technology' Fusion deposition method was used to prepare the specimen. Next, a surface roughness tester was used to measure the specimen's roughness value. Roughness testing was also done at a few drilling locations on the sample. Using the appropriate machine learning program, the algorithm was created. The process's appropriate algorithmic approach was predicted with accuracy and error value. This is measured in real time and compared. Additionally, ML code was designed and implemented successfully utilizing a Python coder.

The sequence of the machine learning algorithm (MLA) is as follows:

- Bringing in the necessary packages.
- Importing the dataset and determining which values are NULL
- Maintaining the variables, both independent and dependent partitioning the dataset (d).
- Maintaining a variable containing machine learning algorithms (MLA)
- Making a box plot to assess how accurate they are
- Evaluating every algorithm for machine learning.

The above mentioned procedures are taken when creating a program and designing an algorithm. There was testing and comparing done. The above steps are followed in the part program formation and algorithm was designed. The testing and comparison was carried out.

3.1 Calculation and Algorithm

Define Cost Function

$$J(\theta) = \frac{1}{2n} \sum_{i=1}^n (y' - y)^2 \quad (1)$$

$J(\theta)$ - Cost function

n - Number of samples

y - True value

y' - Predicted value

Θ - weights (trainable parameters)

$$y' = \theta_0 + \theta_1 x_1 + \dots + \theta_k x_k \quad (2)$$

b_0 - Y-intercept

b_i - Slope of the i th variable

x_i - value corresponding to feature i

$$\theta^{n+1} = \theta^n - \alpha \frac{\partial J(\theta)}{\partial \theta} \quad (3)$$

θ^{n+1} - updated weights (weights at next step)

θ^n - previous weights

α - learning rate ($0 < \alpha < 1$)

$\frac{\partial J(\theta)}{\partial \theta}$ - change of cost function $J(\theta)$ with respect to α

$$0 \leq J(\theta^{n+1}) - J(\theta^n) \leq t \quad (4)$$

t - Threshold value ($0 < t < 1$)

$J(\theta^{n+1})$ - Total cost of updated weights

$J(\theta^n)$ - Total cost of previous weights

Algorithm

- Establish the cost function $J(\theta)$, which quantifies the discrepancy between the expected and realized results.
- Set the model's random weights to zero.
- Using the gradient descent technique, update the weights θ iteratively: $\theta := \theta - \alpha * \nabla J(\theta)$.
- Using a stopping condition, repeat the weight update until convergence is reached.such as the cost function difference threshold or the maximum number of repetitions

4. CONCLUSION

According to the project's goal, the FDM method for creating 3D printed specimens was tested by gathering surface measurement data, which is displayed in Fig. 1.2 at 0.84 nm and 0.087. Which information is contrasted in the MLA result. The last window is created using the 3D printer data set following training. To train the data set, multivariate linear regression is employed. Referring to Fig. 1.3, the model predicts the valueon the training data set with a variance of 2.0840360280300282e-26% and an accuracy of 100%. The program yields 0.095, however the average roughness measured with the "Surface Roughness Tester" is 0.0855. The program has an accuracy of 93.56% and an error of 6.43%, it may be inferred.The accuracy

Fig. 1.2 Roughness check

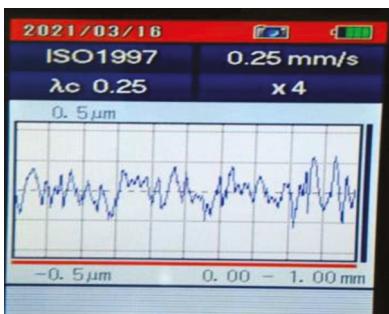

Fig. 1.3 Roughness graph

computation was reported along with the percentage of error.

Figure 1.2–1.3 : Roughness Measurement (a) Position one on Auto Specimen (b) Position two (Drill hole area) on Specimen. (c) Roughness graph for position one.

Accuracy calculation:

- Average roughness value = $0.087 + 0.0842$
- Average roughness value = $0.0855 \mu\text{m}$
- Accuracy = $100 - 0.091 - 0.0855$
- Accuracy = $100 - 6.43$ Accuracy = 93.57%.

The bar chart of variance s in Fig. 1.4 for several machine learning algorithms, including K-nearest neighbour, decision tree classifier, Gaussian Naive Bayes, Random

Forest classifier, and adaptive boosting classifier, is displayed in the graph that compares the various algorithms. We may deduce from the above chart that the decision tree classifier is most appropriate for the prediction phase because it has the lowest variance.

Comparably, Fig. 1.4 displays an accuracy bar chart for several machine learning algorithms, including Gaussian Naive Bayes, Random Forest, Adaptive Boosting, K-nearest neighbour, and decision tree classifiers. The decision tree classifier is the most accurate and, thus, most appropriate for the prediction phase, according to the above figure. Figure 1.4 displays the accuracy vs. variance scatter plot for a variety of machine learning algorithms, including Random Forest, Adaptive Boosting, K-Nearest Neighbour, Decision Tree, and Gaussian Naive Bayes.

The decision tree classifier is the most accurate and least variable, making it the most appropriate for the prediction phase, according to the above figure. The Decision Tree Classifier has a low variance with good accuracy, according to the data analysis of the algorithm selection. After that, a surface roughness tester is used to test the second spot on the specimen, and the results are compared with software that uses machine learning algorithms. The outcome as discovered in the drill bit data set. The program displays the appropriate algorithm and accuracy level.

The drill bit data set is used for the last window following training. Five distinct models are used to train the data set, and accuracy and variance are displayed. Additionally, the models' output is pooled using the maximum vote technique, increasing the average accuracy from 89.73% to 100%. The K-Fold cross validation approach is used to identify the optimal model.

Without any prior computer programming experience, a wide range of engineering areas can benefit from the machine learning project. using less than 10% variance, 90% accuracy may be achieved using the aforementioned

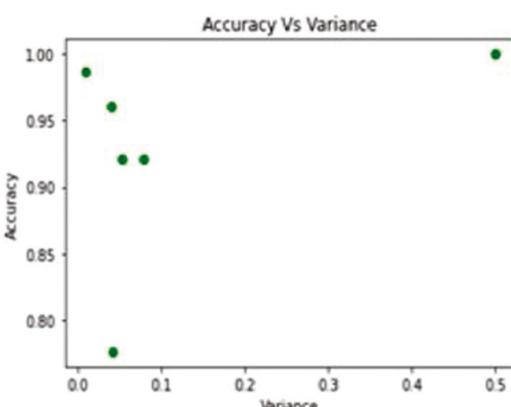

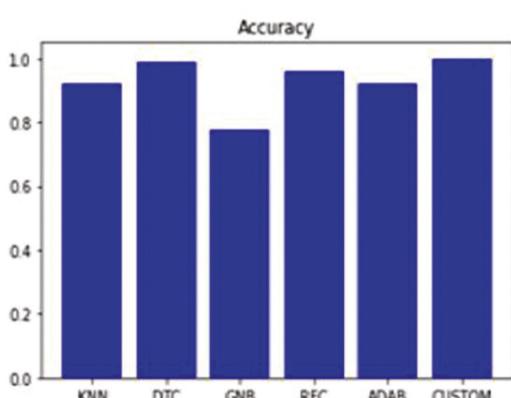

Fig. 1.4 Bar chart and scatter plot of accuracy for different machine learning

program, and a 3D printed object is analyzed. While the program yields 0.091, the average roughness measured with the “Surface Roughness Tester” is 0.0855. The program has an accuracy of 93.56% and an error of 6.43%, it may be inferred.

It can measure a 3D printed object’s roughness simply and without the need for trial and error. By employing this strategy, time is saved. Everyone can simply access it. to enable machine learning in fields other than technology. to use zero code to create machine learning models. to use machine learning with a 3D printer to get precise parameter settings.
